

Destination Green™

- Mix materials however you wish and customise the decoration of your patio.
- All of our tiles can be joined together from any side.
- Lay directly on any hard & smooth floor without any need for glue, nails, screws or joints.
- The plastic base enables draining and ventilation of the floor.

5 steps to making your patio

1 Measure the area to be covered in M² (length x width). 11 30 x 30 cm SNAP & GO tiles are needed to cover 1m².

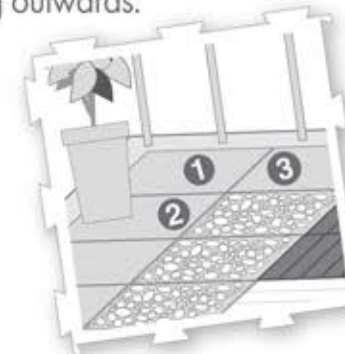

2 Plan the lay-out of your terrace by positioning the various tile finishes and materials (wood, composite, natural stones, artificial lawn, etc.).

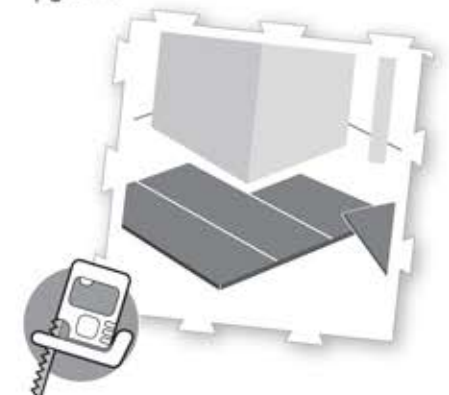

3 Thoroughly clean the floor before starting to lay the material.

4 Lay the tiles and simply snap them together. Begin laying at an interior angle and finish with angles facing outwards.

5 If cutting finishes (angle, border, etc.), it is best to use a jigsaw.

SNAP & GO product range

WOOD

Different essences are available.
Maintenance: The wood on the exterior will naturally go grey. To retain the original colour, lightly sand and apply a special wood treatment oil when necessary.
Washing: Vacuum cleaner, blower, water jet.

COMPOSITE WOOD

Mixture of recycled plastic and natural sawdust.
Maintenance: No maintenance required.
Washing: Vacuum cleaner, blower, water jet.

NATURAL STONES

Lava stones, cobblestone or marble. Wide range of stones, shapes and colours. Ready to lay as is, without grouting.
Maintenance: No maintenance required.
Washing: Vacuum cleaner, blower, water jet.

SYNTHETIC GRASS

High-density, top-comfort quality UV coating. After laying, use brush to stand grass up.
Maintenance: No maintenance required.
Washing: Vacuum cleaner, blower, water jet.
